

## HOW TO MAKE A FACE SHIELD BY FOLDING

	<b>#STEP 1:</b> Using a paper cutter, score the fold lines on a transparent plastic sheet. Each fold line should be scored on one side of the sheet.
	<b>#STEP 2:</b> Fold the plastic sheet on the curved fold lines. The scored lines on the two sides of the plastic sheet should be folded in the opposite direction of each other.
	<b>#STEP 3:</b> Make the holes using a paper punch.
	<b>#STEP 4:</b> Use a staples to fix and lock the corners of the folded plates. Especially if your plastic sheet is too thin, stapling the corners help with the stability of the face shield.
	<b>#STEP 5:</b> Attach the rubber band through the holes ... and you're done!
